

Chart 1: Overall Mining Production Index

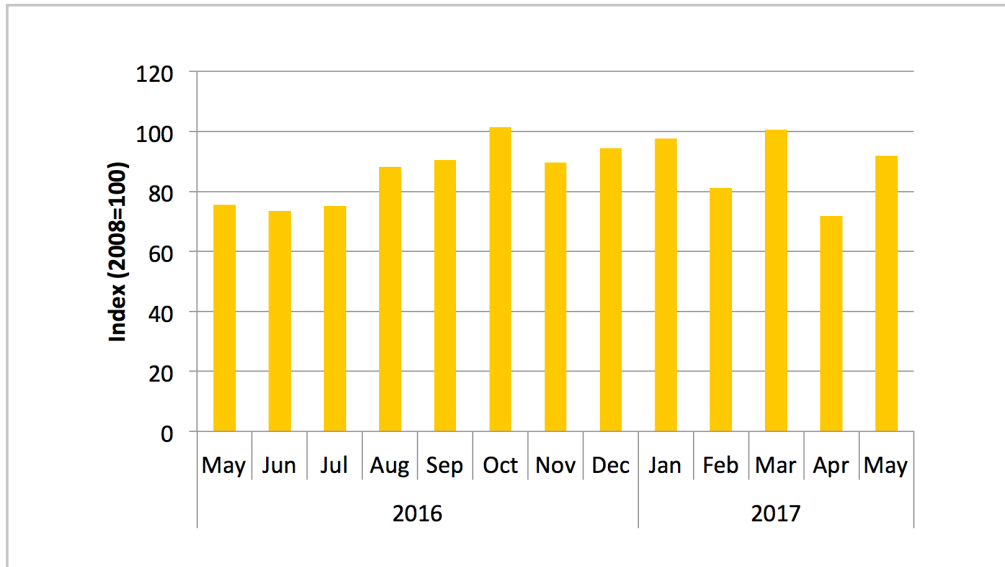

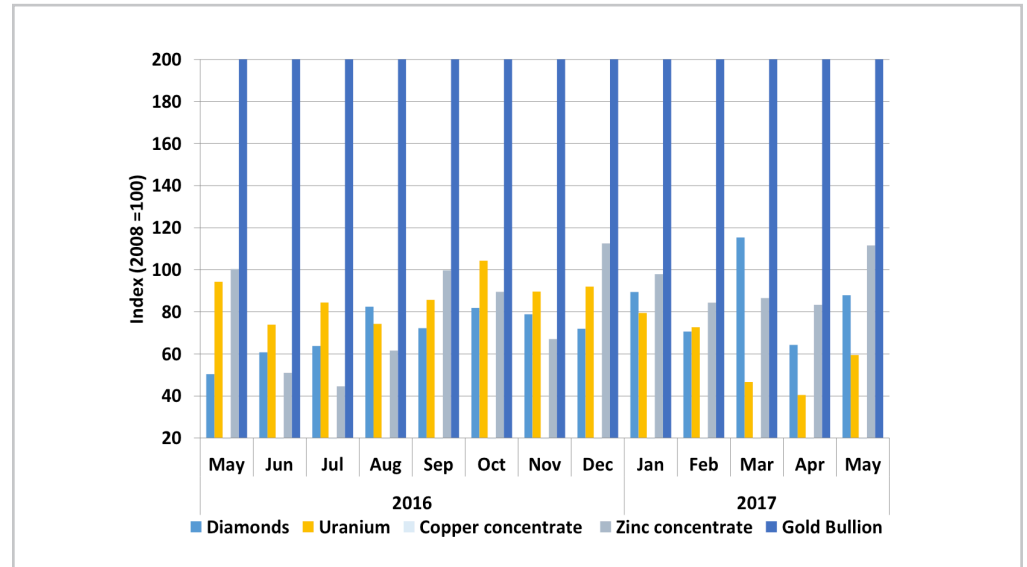

Chart 2: Production Indices of Selected Minerals

- The composite mining index increased, recording 91.7 basis points in May 2017 compared to 71.5 basis points recorded in April 2017. This shows increases of 28.2 percent m/m and 21.4 percent y/y.
- (Chart2) The diamond production index increased, recording 87.9 basis points in May 2017 compared to 64.3 basis points recorded in the preceding month. This translates into increases of 36.7 percent m/m and 74.6 percent y/y.
- Uranium production index increased, recording 59.5 basis points in May 2017 compared to 40.5 basis points in April 2017. This represents an increase of 46.9 percent m/m and a decline of 37.6 percent y/y.
- **There has not been production for copper concentrate for 2017 but the infrastructure at the site is kept at operational level to await favourable economic conditions (care maintenance).**
- Zinc production index increased, recording 111.5 basis points in May 2017 compared to 83.3 basis points recorded in April 2017. This shows increases of 33.9 percent m/m and 11.2 percent y/y.
- The index for Gold Bullion for May 2017 declined, recording 332.0 basis points compared to 370.4 recorded in April 2017. This is a decline of 10.4 percent m/m and an increase of 32.1 percent y/y.

The bar graph is limited to 200 basis points; figures for Gold Bullion exceed the threshold for the reference period.

The bar graph is limited to 200 basis points; figures for Gold Bullion exceed the threshold for the reference period.

Methodology Notes and Data Sources

Data Sources: Ministry of Mines and Energy is the sources of monthly sectoral data.

Note: The data collected for monthly sectoral reports are for selected minerals, namely: Diamond, uranium, copper, Zinc and Gold.

Base year of monthly sectoral reports: 2008

The bar graph is limited to 200 basis points; figures for Gold Bullion exceed the threshold for the reference period.
