

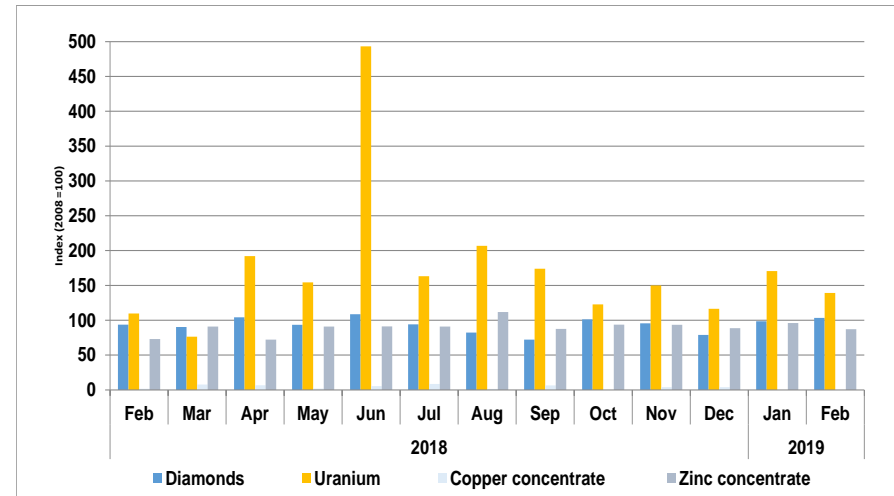

Chart 1: Overall Mining Production Index

- **The mining composite index** recorded 115.7 basis points in February 2019 compared to 126.9 basis points registered in January 2019. This represents a decline of 8.8 percent m/m and an increase of 9.0 percent y/y (Chart 1).
- **The diamond production index** for February 2019 stood at 103.3 basis points compared to 98.6 basis points recorded in the preceding month. These are inclinations of 4.8 percent m/m and 10.3 percent y/y (Chart2).
- **Uranium production index** posted 139.3 basis points in February 2019 compared to 170.7 basis points registered in January 2019. This represents a decline of 18.4 percent m/m and an increase of 27.0 percent y/y.

Chart 2: Production Indices of Selected Mineral

- **There was no production of copper concentrate since December 2017 up to date but the infrastructure at the site is kept at operational level to await favourable economic conditions (care maintenance).**
- **Zinc production index** recorded 87.2 basis points in February 2019 compared to 96.0 basis points registered in January 2019. Showing a decline of 9.2 percent m/m and an increase of 19.4 percent y/y (Chart 2).

Chart 3: Production Index for Gold Bullion

- Chart 3 presents the index for Gold Bullion. The index for February 2019 stood at 240.6 basis points compared to 350.7 basis points recorded in the preceding month. These represent declines of 31.4 percent m/m and 36.4 percent y/y.

Table 1: Mining Composite Index of the Selected Minerals

		Diamonds	Uranium	Copper concentrate	Zinc concentrate	Gold Bullion	Index
2010	Jan	58.8	174.4	0.0	94.4	112.4	95.5
	Feb	56.9	56.9	0.0	63.0	103.3	58.9

Definitions

- **Diamond:** Is a very hard mineral that is a form of bars of carbon and is used especially in Jewellery.
- **Gold Bullion:** Is a gold or silver in bulk before coining or valued by weight which basically means gold bullion is gold valued purify and weights.
- **Zinc:** Is a metallic element with blue- white colour used as a protective covering for iron and to make metal alloys like nickel silver.
- **Uranium:** Is a Silver heavy radioactive polyvalent metallic element that is found especially in uraninite and exists naturally as a mixture of mostly no fissionable elements.

Methodology notes and data sources

Data Sources: Ministry of Mines and Energy is the sources of monthly sectoral data.

Note: The data collected for monthly sectoral reports are for selected minerals, namely: Diamond, uranium, copper, Zinc and Gold.

Base year of monthly mining index: 2008
