

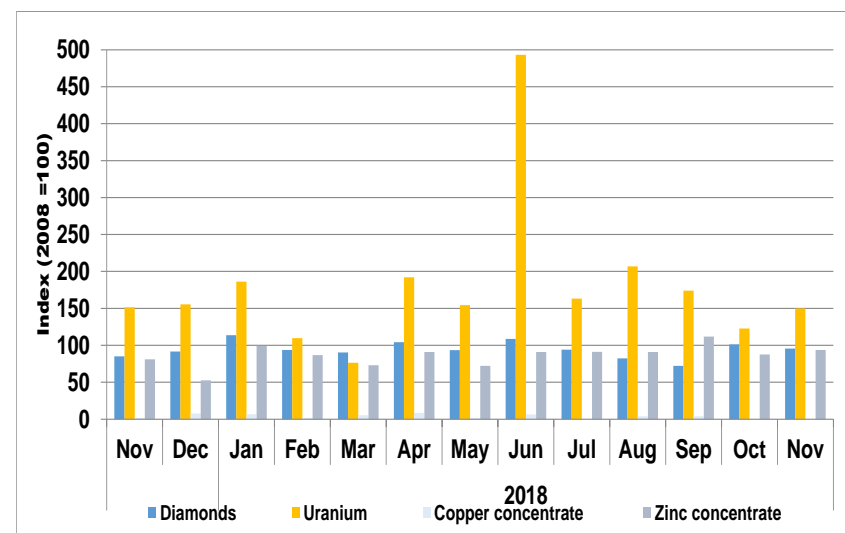

Chart 1: Overall Mining Production Index

- **The mining composite index** recorded 116.9 basis points in November 2018 compared to 114.1 basis points registered in October 2018. This represents increases of 2.5 percent m/m and 4.4 percent y/y (See Chart 1).
- **The diamond production index** for November 2018 stood at 95.6 basis points compared to 101.4 basis points recorded in the preceding month. These represent a decline of 5.7 percent m/m and an increase of 12.5 percent y/y (See Chart2).
- **Uranium production index** posted 149.9 basis points in November 2018 compared to 122.8 basis points registered in October 2018. Representing an increase of 22.1 percent m/m and a slightly decline of 1.0 percent y/y.

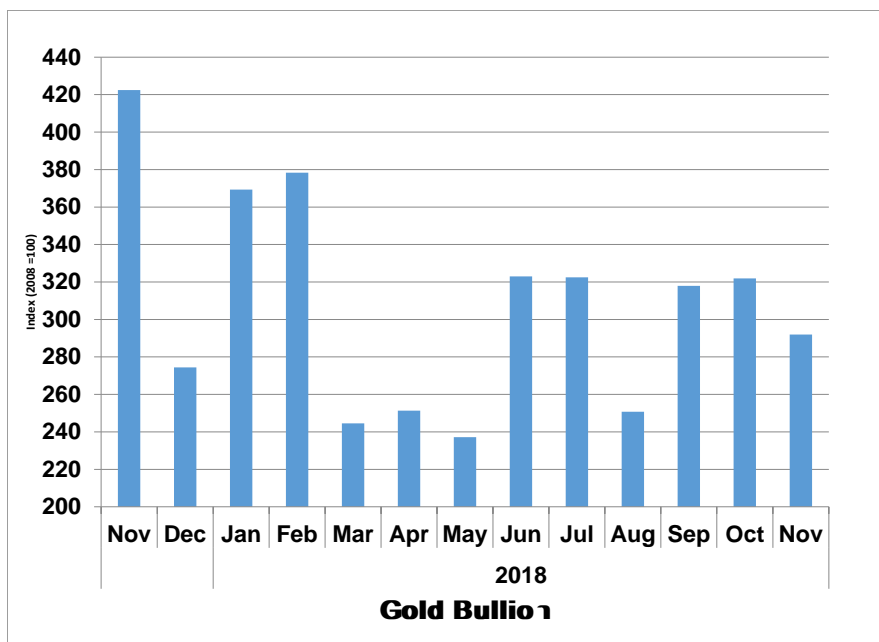

Chart 2: Production Indices of Selected Minerals

- **There was no production of copper concentrate since November 2017 up to date but the infrastructure at the site is kept at operational level to await favourable economic conditions (care maintenance).**
- **Zinc production index** recorded 93.4 basis points in November 2018 compared to 93.6 basis points registered in October 2018. Showing a slightly decline 0.2 percent m/m and an increase of 77.5 percent y/y (See Chart 2).

Production Index for Gold Bullion

- **The Gold Bullion index** for November 2018 stood at 292.0 basis points compared to 321.9 basis points recorded in the preceding month. These represent declines of 9.3 percent m/m and a 30.9 percent y/y.

TABLE 1: Mining composite index of the selected minerals

		Diamonds	Uranium	Copper concentrate	Zinc concentrate	Gold Bullion	Index
2010	Jan	58.8	174.4	0.0	94.4	112.4	95.5
	Feb	56.9	56.9	0.0	63.0	103.3	58.9
	Mar	45.0	108.8	0.0	92.0	145.7	70.9
	Apr	56.8	144.4	0.0	87.0	121.4	85.8

Definitions

- **Diamond:** Is a very hard mineral that is a form of bars of carbon and is used especially in Jewellery.
- **Gold Bullion:** Is a gold or silver in bulk before coining or valued by weight which basically means gold bullion is gold valued purify and weights.
- **Zinc:** Is a metallic element with blue- white colour used as a protective covering for iron and to make metal alloys like nickel silver.
- **Uranium:** Is a Silver heavy radioactive polyvalent metallic element that is found especially in uraninite and exists naturally as a mixture of mostly no fissionable elements.

Methodology notes and data sources

Data Sources: Ministry of Mines and Energy is the sources of monthly sectoral data.

Note: The data collected for monthly sectoral reports are for selected minerals, namely: Diamond, uranium, copper, Zinc and Gold.

Base year of monthly mining index: 2008
